

## Asymptotic Expansions of Solutions of ( + K )U=0 (Classic Reprint) (Paperback)

Filesize: 6.22 MB

### Reviews

*This ebook is very gripping and fascinating. Sure, it is engage in, nevertheless an amazing and interesting literature. It is extremely difficult to leave it before concluding, once you begin to read the book.*

Forgotten Books, United States, 2015. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from Asymptotic Expansions of Solutions of ( + K )U=0 In many of the diffraction problems which arise in electromagnetic theory, acoustics and other fields it is necessary to determine the behavior as  $k \rightarrow (k = 2n/\lambda$ , where  $\lambda$  is the wavelength) of solutions of the reduced wave equation (1)  $(v + k)u = 0$ . This behavior is usually determined by obtaining exact solutions and expanding them asymptotically in  $k$ . If it were possible to obtain the asymptotic expansion of a solution directly from (1) and the other conditions of the problem it might be possible to obtain such expansions in problems for which the exact solutions are not known. It might also be easier to proceed in this way even in problems for which the exact solutions are known. A direct method for constructing the first term in the expansion of a periodic electromagnetic field was devised by R. K. Luneburg, and this method was extended by M. Kline to yield further terms in the expansion and also extended to other equations. This expansion is related to the rays of geometrical optics; the first term in the expansion is called the geometric optics field. Derivations of some of the same results have been given by F. G. Friedlander, J. Riblet (unpublished), H. Bremmer and E. T. Copson. This method is explained and applied to a number of diffraction problems by J. B. Keller and I. Kay; another application was given by C. Schensted. The above method does not yield all asymptotic expansions of electromagnetic fields. Other kinds of expansions which contain exponential decay factors and fractional powers of  $k$ , neither of which appears in the Luneburg-Kline expansions, have...
