Reviews

Without doubt, this is the very best job by any article writer. It typically does not cost too much. You are going to like just how the blogger write this pdf.

BOUNDARY LAYER FREE CONVECTIVE HEAT AND MASS TRANSFER FLOWS

[DOWNLOAD](#)

LAP Lambert Academic Publishing Okt 2016, 2016. Taschenbuch. Condition: Neu. Neuware - In this book mathematical models are developed for different types of free convective heat and mass transfer flows. Magnetic field, chemical reaction, viscous dissipation, porous medium, heat generation, temperature oscillation, ramped wall temperature and Newtonian heating effects are also included in the mathematical models. Stable and convergent finite difference and finite element numerical methods have been used to solve the governing unsteady, coupled, non-linear partial differential equations. Validation of computations is achieved with a MATLAB-based Chebyshev spectral code for transient viscous flows, TranSpecS, He's powerful Variational Iteration Method and Laplace transform technique. The effects of various parameters on the velocity field, temperature and concentration profiles as well as the skin friction, Nusselt number and Sherwood number are evaluated in detail with the aid of graphs and tables. It is hoped that this book will be useful for the students and researchers who are working on fluid dynamics and heat and mass transfer problems. 124 pp. Englisch.
