Many Enterprise Java developers, accustomed to dealing with Javas spiraling complexity, have fallen into the habit of choosing overly complicated solutions to problems when simpler options are available. Building server applications with heavyweight Java-based architectures, such as WebLogic, JBoss, and WebSphere, can be costly and cumbersome. When youve reached the point where you spend more time writing code to support your chosen framework than to solve your actual problems, its time to think in terms of simplicity. In Better, Faster, Lighter Java, authors Bruce Tate and Justin Gehtland argue that the old heavyweight architectures are unwieldy, complicated, and contribute to slow and buggy application code. As an alternative means for building better applications, the authors present two lightweight open source architectures: Hibernate--a persistence framework that does its job with a minimal API and gets out of the way, and Spring--a container thats not invasive, heavy or complicated. Hibernate and Spring are designed to be fairly simple to learn and use, and place reasonable demands on system resources. Better, Faster, Lighter Java shows you how they can help you create enterprise applications that are easier to maintain, write, and debug, and are ultimately much faster. Written for intermediate to advanced Java developers, Better, Faster, Lighter Java, offers fresh ideas--often unorthodox--to help you rethink the way you work, and techniques and principles youll use to build simpler applications. Youll learn to spend more time on whats important. When youre finished with this book, youll find that your Java is better, faster, and lighter than ever before.
